WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

Warm and Dry with NE/Offshore Winds Tuesday Night through Friday Morning

Scattered showers will continue mainly in northern and eastern areas through early Tuesday. A few thunderstorms are possible as well. Snow levels will be 5000-6000 ft. A warming and drying trend will begin late Tuesday as high pressure builds over Northern California from the eastern Pacific. A NE/offshore surface wind pattern will enhance the warming and drying trend from the western Sierra slopes to the coast Tuesday night through Friday morning, with peak gusts reaching 20-30 mph in wind-prone areas Wednesday and Thursday mornings. However, the drying effects from this wind event will not be sufficient to dry fuels out enough to elevate fire potential much, even in the lower elevations in the south. Temperatures will warm to about 5 degrees above normal west of the crest late in the week

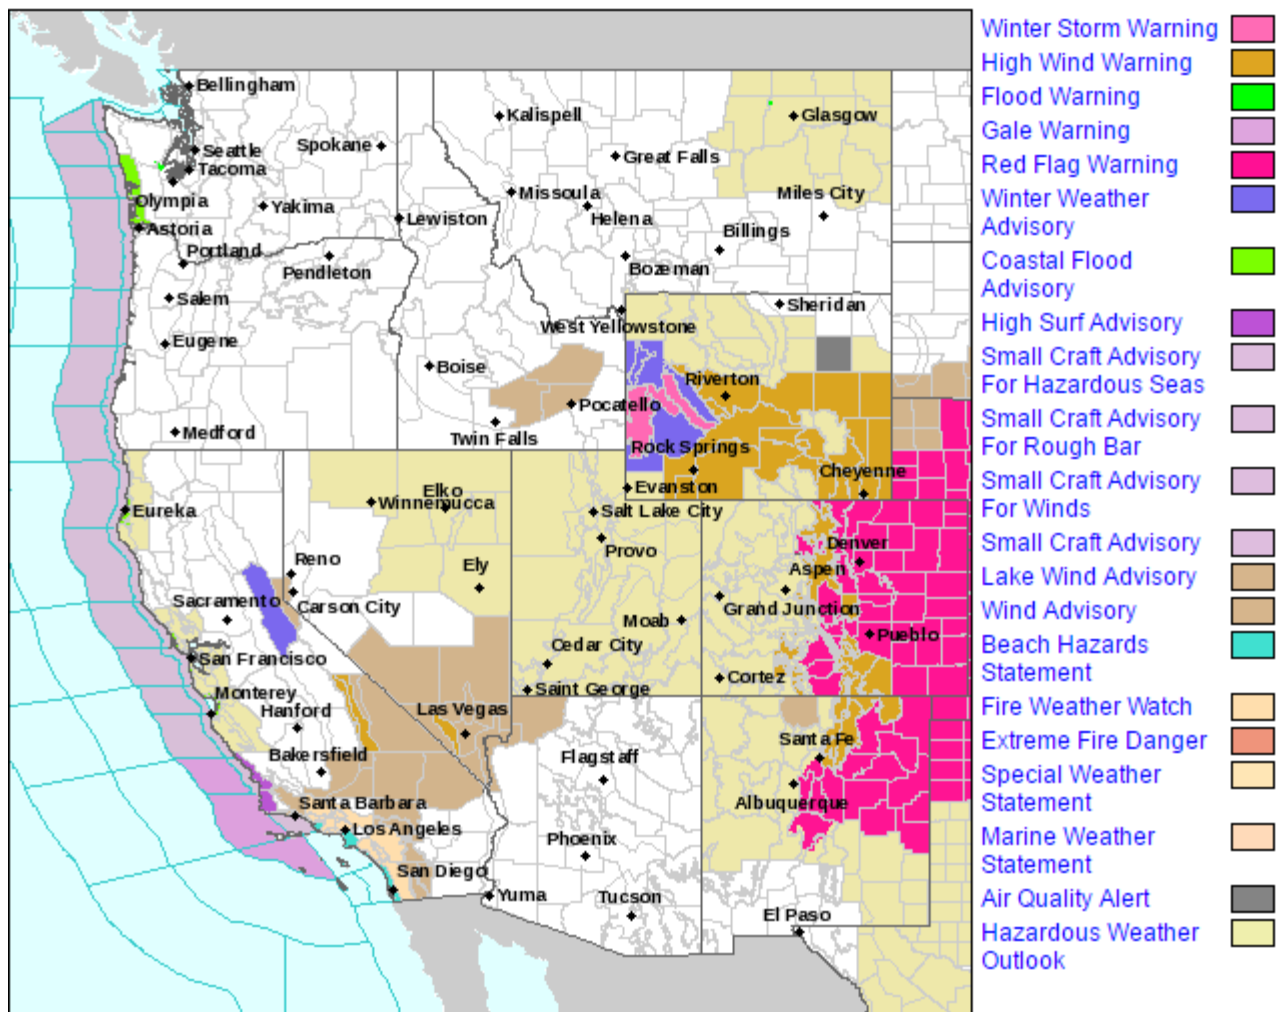

SOUTHERN CALIFORNIA

Windy, hot, and very dry across Southern California Wednesday and Thursday

The remnants of a Pacific storm will bring scattered showers away from the deserts this morning, with less than an additional quarter inch of rainfall. There will continue to be southwest to west winds of 20 to 40 mph with gusts to 60 mph across the mountain ridges and desert passes through tonight. Temperatures will remain 5 to 10 degrees below normal today, with 50s to low 60s across the mountains and mid 60s to mid 70s in the valleys. A weak ridge of high pressure will build into California from the Pacific Ocean causing temperatures to warm to near normal and minimum humidity to drop to 15% to 30% Tuesday. North winds of 20 to 30 mph with gusts to 50 mph will surface across the South Coast of Santa Barbara and the I-5 Corridor tonight through Tuesday night. Surface high pressure over the Great Basin will bring northeast to east winds of 20 to 30 mph with gusts to 50 mph to the mountains and below the canyons and passes of Southern California Wednesday morning through Thursday morning. Winds will start to decrease Thursday afternoon and become light by Friday as the surface high weakens. The ridge of high pressure aloft off the California Coast will become strong and move inland bringing well above normal temperatures to the coastal and valley areas Wednesday through Friday. Minimum humidity will be mainly in the single digits away from the immediate coast Wednesday through Friday. The ridge will move off to the east and onshore flow will occur bringing significant cooling and an increase in humidity to the region this weekend.
